KTS launches MarketTerminal Mobile Messenger All-in-one mobile PDA offers financial information and email access on the move

Knowledge Technology Solutions PLC ("KTS"), providers of market information services in the finance sector, has launched MarketTerminal Mobile Messenger, a new real-time financial information service accessed from a mobile-connected Personal Digital Assistant (PDA).

Microsoft, Hewlett-Packard (HP) and T-Mobile are partnering with KTS to provide an end-to-end mobile application service aimed at equity market professionals who require live market data, news, analytics and email access on the move.

Subscribers to the new MarketTerminal Mobile Messenger service receive a complete 'all in one' package of KTS MarketTerminal delivered on HP's latest iPAQ hw6915 Mobile Messenger device at a cost of just £90 a month on a 24 month contract. As part of the package, T-Mobile's web'n'walk professional data tariff offers subscribers unlimited data access to MarketTerminal, other business applications and email, as well as a monthly voice allowance of 250 minutes with T-Mobile's Business 1-Plan.

The new MarketTerminal PDA software requires minimal bandwidth yet still provides maximum resilience and reliability. In combination with Direct Push email functionality available with Windows Mobile 5.0, MarketTerminal Mobile Messenger represents a valuable all-in-one information and communication tool for financial professionals who want to stay connected while on the go.

MarketTerminal Mobile Messenger offers in-depth coverage of essential financial information - real-time prices, news and analytics. It covers 15 exchanges including the London Stock Exchange, New York Stock Exchange, NASDAQ, Euronext, and Deutsche Boerse. In addition to information access, MarketTerminal Mobile Messenger offers comprehensive functionality to monitor multiple instruments at the same time as well as setting up live price and news alerts to automatically monitor the markets for events whilst on the move.

By launching the MarketTerminal Mobile Messenger KTS is leading the field among financial market data providers in end-to-end mobile solutions.

Sales of mobile-connected PDA devices have been primarily application driven. According to a recent study by Gartner Dataquest, more than 3.6 million PDAs were shipped worldwide in the first quarter of 2006.

KTS assesses the initial addressable market for its new MarketTerminal Mobile Messenger to consist of around 100,000 relevant City of London professionals.

Initial sales are expected to stem from KTS's existing MarketTerminal client base of 130 client organisations. Current KTS MarketTerminal customers include private client stockbrokers, asset managers, advisers and corporate clients.

Microsoft, HP, T-Mobile and KTS are collaborating on sales and marketing initiatives. Specialist teams are working exclusively on a launch campaign for the new MarketTerminal Mobile Messenger.

Dr Marc Pinter-Krainer, Chief Executive of KTS PLC, said:

"We are delighted to be working with such distinguished partners to offer this convenient MarketTerminal Mobile Messenger solution. Increasingly, City professionals want to access key financial information and email when away from the office. Therefore, PDA access to equity news and data is increasingly essential for traders or advisers who must keep fully up-to-date with live markets."

Todd Warren, Corporate Vice President, Mobile and Embedded Devices Division at Microsoft, commented:

"In the past five years there's been a profound shift in the type of data and services people access on their mobile devices, from multimedia to business applications such as KTS's MarketTerminal. The iPAQ hw6915 combines Microsoft's powerful Windows Mobile 5.0 Direct Push email functionality with continued innovation from HP to give business professionals a compelling all-in-one application access device."

Neil Dagger, Handheld and Wireless Device Business Manager, HP UK and Ireland, commented:

"These days people want stock market information at their fingertips, and our new iPAQ hw6915 is the perfect device for getting KTS's MarketTerminal application to busy City professionals with the added benefit of instant email access, camera, WiFi, built in GPS Sat Nav, and pocket internet explorer via Wifi or GPRS. We are delighted to be a part of this Solution."

Derek Williamson, Head of Business Marketing, T-Mobile UK, said:

"Successfully addressing the wireless data demands of today's business market requires a combination of powerful networks and a wide choice of applications. The combination of T-Mobile's web'n'walk professional with Business 1-Plan provides the data and voice requirements to access MarketTerminal and keep in touch. We are pleased to be working with KTS as mobile service provider of choice for the professional finance sector."

Financial professionals can request a free trial of MarketTerminal Mobile Messenger by contacting KTS sales on 020 7256 2300.

About Knowledge Technology Solutions PLC

Knowledge Technology Solutions PLC is an innovative provider of financial market data application services and the company is listed on the Alternative Investment Market of the London Stock Exchange (ticker symbol: KTS).

Utilising its proprietary advanced technologies, KTS focuses on developing and providing real-time thin-client market data services to the financial marketplace by delivering essential market data and news via more cost-effective communications channels.

KTS differentiates itself from other leading information providers as its services are technology driven. They are designed to run on standard PCs and laptops without the need for any installation of dedicated hardware, software or infrastructure, as the application runs on the server side on powerful clusters of highly resilient and secure servers.

Financial professionals can log on to KTS's services by using a standard Internet connection from any geographical location across fixed and wireless networks. KTS's "zero-client" application service offers its clients unprecedented benefits including flexibility and significant cost savings in the areas of support and maintenance of any market data infrastructure and user data, as no client-side components are required and upgrades are automatic.

More than 130 client organisations currently subscribe to KTS's financial information service KTS MarketTerminal.

Fair use policy for web'n'walk professional

MarketTerminal Mobile Messenger incorporates T-Mobile's web'n'walk professional tariff with unlimited data access subject to a fair use policy. T-Mobile defines fair use as total UK data use (both sent and received) of up to 2GB per month. T-Mobile may contact customers who exceed this volume of data in two (or more) consecutive months in any six month period to ask them to reduce their usage. If usage is not reduced, notice may be given, after which network protection controls may be applied which will result in a reduced speed of transmission. Use of Voice over Internet Protocol and Messaging over Internet Protocol is prohibited by T-Mobile. If use of either or both of these services is detected T-Mobile may terminate all contracts with the customer and disconnect any SIM cards and/or web'n'walk cards from the T-Mobile network.

About HP

HP is a technology solutions provider to consumers, businesses and institutions globally. The company's offerings span IT infrastructure, global services, business and home computing, and imaging and printing. For the four fiscal quarters ended April 30, 2006, HP revenue totaled \$88.9 billion. More information about HP (NYSE, Nasdaq: HPQ) is available at www.hp.com.

About Microsoft

For further information on Windows Mobile, please go to the following website: www.microsoft.com/windowsmobile/default.mspx.

About T-Mobile

T-Mobile is one of the world's largest mobile operators with around 80 million customers worldwide and in the UK it is the network of choice for over 16 million customers, more than any other UK network.

T-Mobile has a range of innovative products and services such as Business 1-Plan, U-Fix, a tariff that combines pay-as-you-go and a monthly contract and web'n'walk professional, which enables customers to access their systems and information on the move. T-Mobile's network coverage is among the best in the UK (over 99% of the UK population) with one of the lowest dropped call rates.

It offers the largest worldwide Wi-Fi network, with over 1,000 HotSpots in business-friendly locations in the UK and 19,000 worldwide, and offers a rapidly expanding 3G network across the UK.
